INTRODUCTION
SELECTING THE SAMPLING STRATEGY
     Plant performance
     Seasonal variations in emissions
     Sampling objective
PLANT ASSESSMENT AND DATA COLLECTION
     Preparation of a sampling campaign
     Sample identification and data sheet
     Factors that can limit the validity of the results
     Practical advice for analytical measurements
     General methodology for sampling
     Sampling in the framework of the off-gas measurements
     Testing and measurements protocol
EMISSION MEASUREMENTS
N2O MEASUREMENT IN OPEN TANKS
     Protocol for measuring the surface flux of N2O
MEASUREMENT OF OFF-GAS FLOW IN OPEN TANKS
     Protocol for aerated or aerobic zone
     Protocol for non-aerated zones
AQUEOUS N2O and CH4 CONCENTRATION DETERMINATION
     Measurement protocol for dissolved N2O measurement using polarographic electrodes
     Measurement protocol for dissolved gases using gas chromatography
     Measurement protocol for dissolved gas measurement by the salting-out method
     Measurement protocol for dissolved gas measurement by the stripping method
DATA ANALYSIS AND PROCESSING
     Determination of fluxes
     Determination of aggregated emission fractions
     Calculation of the emission factors
